Who are Oysta?

Oysta cares about improving lives, and works to transform the provision of safe independence for the most vulnerable in our society and the safety at work for those caring for the vulnerable.

Oysta helps find new ways of sustaining independence through the use of mobile technologies, delivering better quality care while also substantially reducing care costs.

Mobile delivers better for less, enabling person-centred care at home and in the community - early intervention, preventative care, self-care, and protecting the elderly and those with conditions that make them vulnerable.

The Oysta service provides safer independence for vulnerable people of any age everywhere, not just in the home. Because it's mobile, vulnerable people can lead freer, happier lives.

Carers and family members can also have greater involvement in the care and support of loved ones by receiving alerts on their mobile and see them online.

What is Oysta SafeHome?

The Oysta Safe Home service connects the best of Oysta's mobile service with sophisticated home sensors to provide greater all-round protection - day and night - inside and outside their home.

Safe Home combines simple 'smart-home' features with robust safety functions in neat packages to suit a person's needs. Oysta Safe Home allows help to be summoned in a number of ways and even provides pro-active checks to monitor someone's welfare.

Oysta SafeHome is designed for people who:

- desire greater freedom and independence
- would like to enhance safety around their home
- prefer smart-home simplicity rather than cables
- require a simple way to call for assistance
- wish to give reassurance for loved ones/carers
- want to ensure someone can find them if they need to.

SMART CARE FOR YOU

Designed for you

Configure and personalise the functions of the service to meet your specific needs - all configuration is done remotely over-the-air.

Easy to install

No onsite installation or complex equipment means costs are reduced and the discrete sensors are less intrusive in your home

Constant peace of mind

With a combination of Oysta's Safe Home with our Mobile Service, your loved ones can be connected and protected by Oysta all of the time.

Make informed decisions

Oysta helps you to monitor a person's health and wellbeing through a simple dashboard - identifying underlying trends and managing better outcomes.

key sensors

Smart Gateway

No need for a telephone line. The smart gateway is a home hub that sends alerts and real-time data to the Oysta platform via the 4G network or broadband. The smart gateway can also operate as your router, bringing Wi-Fi internet to your home.

Smart Lights

A number of falls occur due not putting the hallway or landing light on. Now you don't have to. These Smart Lights will detect movement and switch on, providing enough light to illuminate the way.

Smoke, gas & carbon monoxide

Part of any basic telecare service is to ensure that the house is fire and gas safe. These sensors can be connected to a monitored telecare service.

Environmental sensors

Passively monitors temperature and possible floods.

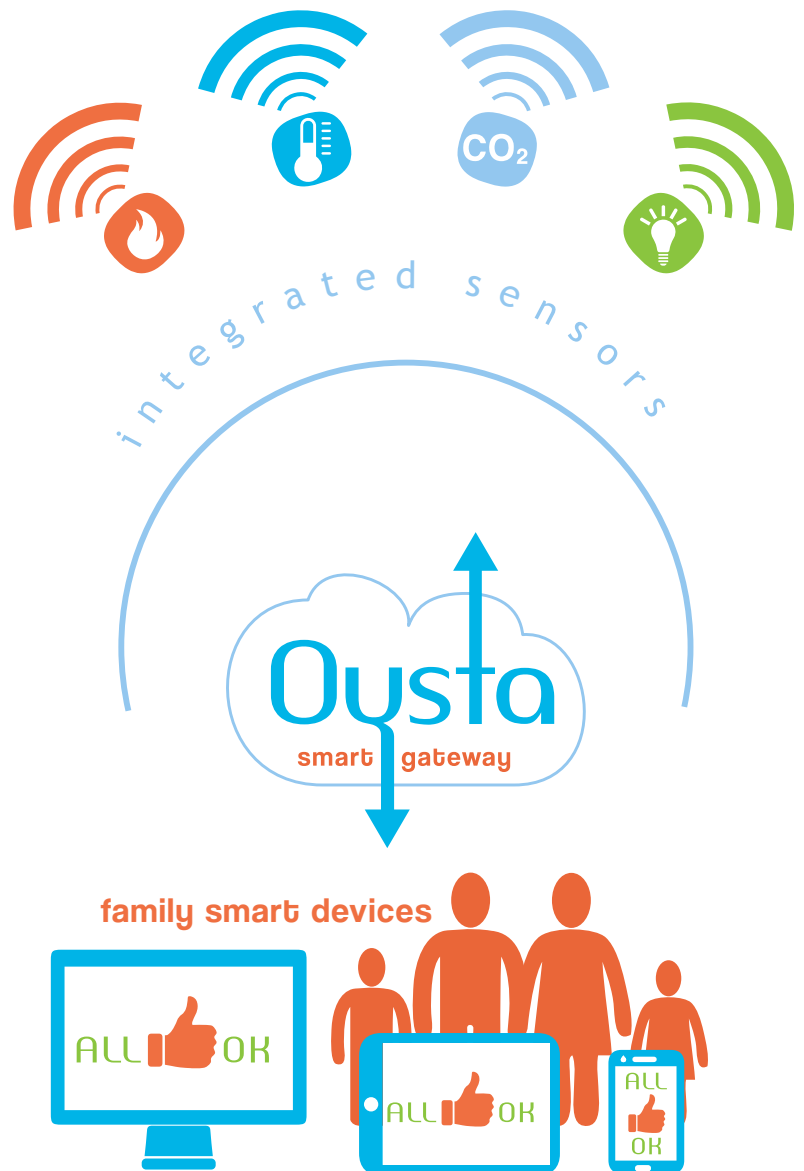

Property Exit and Door Contacts

Know when someone enters or leaves their home or opens/closes internal doors e.g. fridge or cupboards.
