### Who are Oysta?

Oysta cares about improving lives, and works to transform the provision of safe independence for the most vulnerable in our society and the safety at work for those caring for the vulnerable.

Oysta helps find new ways of sustaining independence through the use of mobile technologies, delivering better quality care while also substantially reducing care costs.

Mobile delivers better for less, enabling person-centred care at home and in the community - early intervention, preventative care, self-care, and protecting the elderly and those with conditions that make them vulnerable.

Carers and family members can also have greater involvement in the care and support of loved ones by receiving alerts on their mobile and see them online.

### What is the Oysta HelpOnHand??

The Oysta **HelpOnHand** offers the latest in mobile telecare safety and features sophisticated tracking and communication capabilities to enhance the wearer's safety.

If lost, distressed or in need of help, the wearer can easily trigger an alarm. It allows telecare service providers to regularly check in with the wearer, be alerted of the wearer's location, and even communicate over a built-in speakerphone.

Designed for vulnerable people who:

- desire greater freedom and independence
- prefer to use a wearable rather than 'button and box'
- want protection inside and outside their home
- need a simple way to call for assistance
- wish to give reassurance to loved ones/carers
- need to ensure someone can find them if necessary

### Oysta Platform

Configure and personalise the functions of the service to meet your specific needs - all configuration is done remotely over-the-air.

### One-touch SOS button

Just one push of the SOS Button will contact a pre-defined number and send a message with location information.

### Find loved ones fast

Accurate GPS transmits location information to a secure platform where you can provide assistance wherever they are.

### Highlight Safe Areas

Know when the wearer leaves their home and reaches their destination, or if they don't return home.

## All-In-One

The Oysta **HelpOnHand** is not only a digital watch with time, date and day displayed, it allows two-way communication just like a mobile phone (with speaker and microphone) as well as accurate location data from GPS - ensuring wherever you are, safety is always on hand.

## One Touch SOS Button

If you are in distress or just need peace of mind, press the support button to get help. The Oysta **HelpOnHand** will send your details to your chosen control room or contact and open a two way voice call.

## Safety Zones

Simply create safe zones to monitor movements in and out of areas at certain times of the day or night. When leaving a 'safe zone' an alert can be sent to the care network.

## Reminder messages

Simple messages can be pre-set to send to the device, helping them to remember important tasks and making it a useful tool to help manage daily living e.g. medication, doctor/hospital appointments, support groups etc
